Can I use Mapbox with AngularJS?

<http://imgtfy.com/?q=mapbox+angularjs>

Angular Leaflet Directive

A directive has already been made for you:

<https://github.com/tombatossals/angular-leaflet-directive/>

<http://tombatossals.github.io/angular-leaflet-directive/>

Using Bower

```
$> bower search angular-leaflet-directive
angular-leaflet-directive git://github.com/tombatossals/angular-leaflet-directive
angular-leaflet git://github.com/tombatossals/angular-leaflet-directive.git
ws-angular-leaflet-directive git://github.com/ws-anashkin/angular-leaflet-directive.git
angular-leaflet-directive-ext git://github.com/Asymmetrik/angular-leaflet-directive-ext.git
angular-leaflet-directive-ws git://github.com/ws-anashkin/angular-leaflet-directive.git
angular-leaflet-directive-temp git://github.com/TheCodeDestroyer/angular-leaflet-directive.git
angular-leaflet-directive-websailors git://github.com/ws-anashkin/angular-leaflet-directive.git
wavel-leaflet-directive git://github.com/Arnooo/angular-leaflet-directive.git
```

```
$> bower install --save angular-leaflet-directive
```

```
angular-leaflet-directive#0.10.0 www/lib/angular-leaflet-directive
└─ angular#1.4.3
└─ leaflet#0.7.7
```

```
leaflet#0.7.7 www/lib/leaflet
```

Include the Javascript files

Add the required files to index.html:

```
<html>
<head>
  ...

  <!-- add the stylesheets here -->
  <link href="lib/leaflet/dist/leaflet.css" rel="stylesheet">

  ...

  <!-- ionic/angularjs js -->
  <script src="lib/ionic/js/ionic.bundle.js"></script>
  <script src="lib/a0-angular-storage/dist/angular-storage.js"></script>

  <!-- add the javascripts here (AFTER the ionic library) -->
  <script src="lib/leaflet/dist/leaflet-src.js"></script>
  <script src="lib/angular-leaflet-directive/dist/angular-leaflet-directive.js"></script>
</head>
<body>
  ...
</body>
</html>
```

Mapbox Configuration

You will need:

- a map ID
- a public access token

Create a Mapbox editor project

heig-vd

Haute Ecole d'Ingénierie et de Gestion
du Canton de Vaud

The screenshot shows the Mapbox Classic web interface. On the left is a dark sidebar with the Mapbox logo and navigation links: Home, Styles, Tilesets, Stats, and Classic (which is highlighted). The main content area is titled 'Mapbox classic' and shows '0 Classic styles' and '2 Mapbox Editor projects'. A blue button labeled 'New Mapbox Editor project' is visible. Below this, two projects are listed:

- Citizen Engagement 2016**: Modified an hour ago, 1 layer. The map ID 'alphahydrae.pjph1k4...' is highlighted with a red box.
- My First Map**: 1 layer. The map ID 'alphahydr...labeii0...' is highlighted with a red box. A blue callout box with a pointer indicates: 'Retrieve your **map ID**.'

Each project entry includes a thumbnail map, the project name, modification details, the map ID, a copy icon, and a set of action icons (stats, layers, delete, share, edit).

Retrieve your access token

Mapbox

Home

Styles

Tilesets

Stats

Classic

Manage account

Access token

Your default access token is:

pk.eyJ1Ijo

You'll need your [access token](#) to use any of the [Mapbox APIs and libraries](#).

Add or revoke tokens

Mapbox Configuration

You should add them to your configuration files:

In:

- config/development.json
- config/production.json

```
{  
  "apiUrl": "http://api.example.com",  
  "mapboxMapId": "...",  
  "mapboxAccessToken": "...",  
}
```

In constants.js (root directory of the app):

```
angular.module("citizen-engagement.constants", [])  
  .constant("apiUrl", "@apiUrl@")  
  .constant("mapboxMapId", "@mapboxMapId@")  
  .constant("mapboxAccessToken", "@mapboxAccessToken@")  
;
```

In gulpfile.js:

```
.pipe(replace(/@apiUrl@/, config.apiUrl))  
.pipe(replace(/@mapboxMapId@/, config.mapboxMapId))  
.pipe(replace(/@mapboxAccessToken@/, config.mapboxAccessToken))
```

Don't forget to re-run **gulp config-development** or **gulp config-production** to apply the new configuration.

Add the AngularJS module

Add the new dependency to your application module:

```
angular.module("citizen-engagement", ["...", "leaflet-directive"])
```

Add the required data to your controller:

```
.controller("MapController", function($scope, mapboxMapId, mapboxAccessToken) {  
  
    var mapboxTileLayer = "http://api.tiles.mapbox.com/v4/" + mapboxMapId;  
    mapboxTileLayer = mapboxTileLayer + "/{z}/{x}/{y}.png?access_token=" + mapboxAccessToken;  
  
    $scope.mapDefaults = {  
        tileLayer: mapboxTileLayer  
    };  
  
    $scope.mapCenter = {  
        lat: 51.48,  
        lng: 0,  
        zoom: 14  
    };  
  
    $scope.mapMarkers = [];  
});
```

Add the directive to your template:

```
<ion-content scroll="false">  
  <leaflet defaults="mapDefaults" center="mapCenter" markers="mapMarkers" height="100%" data-tap-disabled="true"></leaflet>  
</ion-content>
```

Mapbox: Adding a Marker

Simply add it to the **mapMarkers** \$scope variable.
The directive will automatically be updated.

```
.controller("MapController", function(IssueService, mapboxMapId, mapboxAccessToken) {  
    // ...  
    $scope.mapMarkers = [];  
    var issue = IssueService.getIssue();  
    $scope.mapMarkers.push({  
        lat: issue.lat,  
        lng: issue.lng,  
        message: "<p>{{ issue.description }}</p><img src='{{ issue.imageUrl }}' width='200px' />",  
        getMessageScope: function() {  
            var scope = $scope.$new();  
            scope.issue = issue;  
            return scope;  
        }  
    });  
});
```

Beware of The Bug

If you copy-paste examples from the angular-leaflet-directive project, don't forget to add the **data-tap-disabled="true"** attribute.

```
<leaflet defaults="mapDefaults" center="mapCenter" markers="mapMarkers" data-tap-disabled="true"></leaflet>
```
